Medical Director, Keystone
Clinical Studies
Clinical Asst. Professor (Adjunct),
Temple University Dept of
Psychiatry

Regina Vaughn
ASALH- Philadelphia Heritage
Branch, (Association for the Study
of African American Life and
Heritage)

The prevalence of Alzheimer's Disease is growing, especially in the African American community, where the prevalence is twice that of Caucasians. The personal, social, and health care costs are hard to even contemplate. There are medications in late-phase clinical trials which address the brain changes of Alzheimer's at multiple stages of the disease and through multiple mechanisms of action. Join us in person at The College of Physicians of Philadelphia or on Zoom for a multidisciplinary discussion on the growing prevalence of Alzheimer's Disease, the community perspective on providing care, and changing perspectives on clinical trial participation.
